

Amendments to the Specification

Please replace the paragraph beginning at page 18, line 14, with the following rewritten paragraph:

As measures to remove color material particles attached on the upper surface of the spacer or to prevent them from attaching thereon, for example, setting the adhesive property of the ~~opposed~~upper surface lower than that of the second substrate, and shaking the spacer to remove the color material particles on the ~~opposed~~upper surface are conceivable. In the case of removing the color material particles, moving a blade that is in contact only with the upper surface of the spacer relative to the second substrate to remove the color material particles attached on the upper surface of the spacer is possible.
